PURPOSE AND OUTCOME

Course Overview

Determining the optimum combination of mechanisms by which our society and its members can pay for health care has been an enduring element of our national health policy conversation for more than a hundred years. And it can be found in the historical record of other cultures for more than a millennium. It is an area that encompasses (a) an ongoing philosophical conversation about the nature of health care and related fiscal considerations; and (b) a much more pragmatic set of conversations reflecting premiums, payments and processes as they are currently operative. Hence some of our conversations will be quite theoretical and abstract, while others will be much more detailed and factual in their objective.

Course Objectives and/or Goals

Future healthcare managers and leaders need to have a strong familiarity with not only the general concepts of health insurance but the specific mechanisms as to how insurance products are implemented. Therefore the course will be broken up into three modules.

1. Health Insurance Concepts
2. Reimbursement Processes
3. Revenue Cycle
