Instructor Information

Xinguang “Jim” Chen, MD, PHD, ACE Fellow
2004 Mowry Road, CTRB Bldg. Room # 4232
Office phone: (352) 294-5945
Contact email: jimax.chen@ufl.edu
Office hours: By appointment

Course Overview or Purpose

This course is intended to ensure that students: a) understand the various epidemiological research methods used to obtain evidence regarding infectious disease transmission and health outcomes; b) can interpret the existing evidence needed to make public health or policy recommendations; and c) are able to propose research strategies to obtain evidence needed to improve public health outcomes related to infectious diseases. Topic areas will include key infectious diseases with great health threat in the early 21st century. These include HIV infection, other sexually transmitted diseases, tuberculosis, malaria, other vector-borne infections, influenza, diarrheal diseases, emerging infectious diseases (SARS, Zika, Ebola, etc.), and healthcare-associated infections. Additional topics will be offered to meet the need of students for one or two diseases that are not covered (to be determined in the first session of the class). Students will use the knowledge and skills gained in the course to design an original research study of their choice of an infectious diseases to address at least one research question using the knowledge and skills learned in this course.

Course Objectives and/or Goals

1) Identify and describe current public health issues related to the most important infectious diseases challenging in the United States and other countries.
   a. Use data from different resources to obtain information regarding the epidemiology of the infectious diseases covered in this class.
b. State relevant facts related to several of the most pressing infectious disease topics either assigned by the instructor or picked by students themselves.

c. Interpret data from tables, graphs, and research papers that describe infectious disease epidemiology.

d. Describe factors that influence variations in health outcomes of specific infectious diseases across diverse populations.

2) Describe strategies to reduce the transmission of infectious diseases.

a. Identify specific factors that are associated with infectious diseases transmission, including characteristics of the pathogen, the human host, other animals and vectors, and the environment.

b. Understand the reproductive rate equation in infectious disease epidemiology, and describe the use of the equation in public health intervention strategies to curb the epidemic of an infectious disease.

c. Explain specific prevention strategies to prevent infectious disease transmission, including social, technical and biological social factors vaccines.

3) Understand the strengths and identify the weaknesses of published epidemiologic research studies as they apply to infectious disease epidemiology.

a. Discuss the strengths and limitations of specific research study designs used to obtain evidence in infectious disease epidemiology.

b. Describe strengths and limitations in our ability to measure the impact of infectious diseases in human populations, including measurement of infection (e.g. diagnosis) and health outcomes and behaviors.

c. Explain how various research tools, such as genetic sequencing of pathogens, and mathematical models, can be used to inform knowledge about infectious disease transmission and prevention.

4) Design and critique research studies to answer research questions related to a specific infectious disease.

a. Conceive and construct research questions that include study population, predictors, and outcomes from existing literature, your own research study, or a hypothetic scenario.

b. Design an original research study and present it both in written document and through oral presentation in class.

Course Materials

Journal articles: 1-3 articles per topic area, either PDF or hyperlink, provided by the instructor.

Other information: Website from CDC, WHO and other sources.

Course Requirements/Evaluation/Grading

Time commitment. The class will meet once a week on Wednesday. In each session, the instructor will give a lecture and questions in the first hour, followed by a two-hour group discussion and debating. Overall approximately, 1/3 will be used for the instructor to review the
main the topics, including research questions, methods to address the questions and result interpretation; 1/3 of the time will be used for student-led group discussion of research articles or existing data; and 1/3 will include presentations by guest lecturers who will discuss their research activity for specific infectious disease topics.

For this 3-credit graduate course, students are expected to spend approximately 6-9 hours per week outside of class reviewing core information about the infectious disease topic of the week, preparing for the discussion, and working towards their final research project.

The class schedule of topics and guest lectures is available and will be updated timely during the semester if change is necessary.

**Article review and presentation: 30% of grade.** Each student will present at least two journal articles during the semester and participate in class discussions. For article review, students will be assigned one or two specific infectious disease topics to present on. At least two weeks prior to the presentation date, the student will do a literature search for articles related to the topic and choose 1-3 articles they would like to discuss. The articles should present original research data, including meta-analysis. Students must submit their article selections to Dr. Chen for approval at least 10 days prior to their scheduled presentation, so that the assigned article can be distributed to the class 7 days prior to the day of discussion. On the day of each paper discussion, the student will lead a 15-20 minute class discussion in which all classmates should participate. The presenting student should be sure to address:

1. What is the specific research question, and why is it significant?
2. What was known and unknown that supported the study?
3. What is the study design, and why was that design used?
4. Who was the population and how was a sample of the population identified?
5. What was the major outcome and how was it measured?
6. If you are the person who investigated the same problem, what would be your approach?

**Peer review of classmates' research paper: 10% of grade.** Each student is anticipated to review and lead classroom discussion for at least twice.

**Class participation: 5% of grade.** The class will involve a lot of discussion, and students are expected to participate by being present in class and by speaking and discussing the topics of the day. Grades for class participation are generally provides as excellent (95), good (90), or could have been better (85). Missing 2 classes for any reason will result in 5 points off, unless specifically negotiated with the instructor.

**Final research paper (15%) and presentation (15%).** Each student will identify a research topic around infectious disease of their own choosing, and prepare a 20-minute oral presentation and a 10-15 page (double spaced) paper outlining the rationale and the study design for a research study, that the student designs, and that is designed to answer a specific research question. The paper will have several deadlines for completion of benchmarks during the semester, and peer review of other students’ papers. Accomplishing these benchmarks will be part of the grade.

The paper will be graded and returned to the student one week before the oral presentation, to allow students time to incorporate feedback into the presentation. Students will identify up to 3 specific learning objectives for the oral presentations.

**Final exam. 25%.** There will be one final exam that will include a combination of question types (e.g. multiple choice, matching, open-ended, interpretation of information).
Grades:

- Article review and presentations  30%
- Peer review of classmates’ paper  10%
- Class participation  5%
- Written Paper  15%
- Oral Presentation  15%
- Final exam  25%

The grading scale for this course consists of the standard scale, including minus grades, below. The conversion factors for grade point values that are assigned to each grade are also included (in parentheses):

- 93% - 100% = A (4.00)
- 90% - 92% = A- (3.67)
- 87% - 89% = B+ (3.33)
- 83% - 86% = B (3.00)
- 80% - 82% = B- (2.67)
- 77% - 79% = C+ (2.33)
- 73% - 76% = C (2.00)
- 70% - 72% = C- (1.67)
- 67% - 69% = D+ (1.33)
- 63% - 66% = D (1.00)
- 60% - 62% = D- (0.67)
- Below 60% = E (0.00)

Statement of University’s Honesty Policy (cheating and use of copyrighted materials)

Academic Integrity – Students are expected to act in accordance with the University of Florida policy on academic integrity (see Graduate Student Handbook for details). Cheating or plagiarism in any form is unacceptable and inexcusable behavior. This will be discussed during the first day of class.

We, the members of the University of Florida community, pledge to hold ourselves and our peers to the highest standards of honesty and integrity.

Policy Related to Class Attendance:

5% of grade is related to class participation. 1-2 excused absences are allowed; additional absences will count against this grade.

Policy Related to Make-up Exams or Other Work

Example:

Attendance and Make-up Work – Personal issues with respect to class attendance or fulfillment of course requirements will be handled on an individual basis.

Online Faculty Course Evaluation Process Students are expected to provide feedback on the quality of instruction in this course by completing online evaluations at
https://evaluations.ufl.edu. Evaluations are typically open during the last two or three weeks of the semester, but students will be given specific times when they are open. Summary results of these assessments are available to students at https://evaluations.ufl.edu/results/. The instructor will provide a bonus on the final quiz if there is over a 93% response rate for course evaluations.

**SUPPORT SERVICES**

**Accommodations for Students with Disabilities** If you require classroom accommodation because of a disability, you must register with the Dean of Students Office http://www.dso.ufl.edu within the first week of class. The Dean of Students Office will provide documentation of accommodations to you, which you then give to me as the instructor of the course to receive accommodations. Please make sure you provide this letter to me by the end of the second week of the course. The College is committed to providing reasonable accommodations to assist students in their coursework.

**U Matter, We Care** Your well-being is important to the University of Florida. The U Matter, We Care initiative is committed to creating a culture of care on our campus by encouraging members of our community to look out for one another and to reach out for help if a member of our community is in need. If you or a friend is in distress, please contact umatter@ufl.edu so that the U Matter, We Care Team can reach out to the student in distress. A nighttime and weekend crisis counselor is available by phone at 352-392-1575. The U Matter, We Care Team can help connect students to the many other helping resources available including, but not limited to, Victim Advocates, Housing staff, and the Counseling and Wellness Center. Please remember that asking for help is a sign of strength. In case of emergency, call 9-1-1.

**Counseling and Student Health** Students sometimes experience stress from academic expectations and/or personal and interpersonal issues that may interfere with their academic performance. If you find yourself facing issues that have the potential to or are already negatively affecting your coursework, you are encouraged to talk with an instructor and/or seek help through University resources available to you.

- The Counseling and Wellness Center 352-392-1575 offers a variety of support services such as psychological assessment and intervention and assistance for math and test anxiety. Visit their web site for more information: http://www.counseling.ufl.edu. On line and in person assistance is available.
- You Matter We Care website: http://www.umatter.ufl.edu/. If you are feeling overwhelmed or stressed, you can reach out for help through the You Matter We Care website, which is staffed by Dean of Students and Counseling Center personnel.
- The Student Health Care Center at Shands is a satellite clinic of the main Student Health Care Center located on Fletcher Drive on campus. Student Health at Shands offers a variety of clinical services. The clinic is located on the second floor of the Dental Tower in the Health Science Center. For more information, contact the clinic at 392-0627 or check out the web site at: https://shcc.ufl.edu/
- Crisis intervention is always available 24/7 from: Alachua County Crisis Center (352) 264-6789 http://www.alachua county.us/DEPTS/CSS/CRISISCENTER/Pages/CrisisCenter.aspx

**Inclusive Learning Environment**
Infectious disease transmission and related behaviors are topics on which people have a range of attitudes, beliefs, and opinions. A diverse mix of people from many different backgrounds take this course. We have the opportunity to gain understanding of different ideas through respectful communication and discussion. Please be respectful of each other. The course instructor and the University of Florida are committed to non-discrimination with respect to race, creed, color, religion, age, disability, sex, sexual orientation, gender identity and expression, marital status, national origin, political opinions or affiliations, genetic information and veteran status. If you have questions or concerns about your rights and responsibilities for inclusive learning environment, please communicate with your instructor or refer to the Office of Multicultural & Diversity Affairs website: www.multicultural.ufl.edu.
